Muse

Bluetooth™ Hi Fi Music System

Experience a new Sound

“From the first moment you hear the Muse, you experience a rich detailed sound that has plenty of power to excite your senses.”

These words encapsulate our simple design requirements for our newest audio system the Muse. To state it simply, the Muse makes your music sound great while it is also very easy to use.

Main Features

- Dock Free
- Streaming
- Two way remote control
- Performance
- Compatible with Bluetooth™ devices

Muse

Bluetooth™ Hi Fi Music System

For the Technically minded

Power Supply

AC110 - 240 Volts, 50-60Hz

Power Consumption

140 Watts

Standby Mode Consumption

0.45 Watts

Output Power

180 Watts

Effective Bluetooth Range

10 Metres Open Air

Auxiliary Input

3.5mm Stereo Mini Jack

Bluetooth Version

V2.1 + EDR

Product Weight

7.3Kg

Unit Dimensions

D166mm x H202mm x W400mm

Connect with the Power of Bluetooth™

Bluetooth™ provides a very convenient connection between your device and the Muse. Just pair your phone or other Bluetooth™ equipped device to stream your favourite music. The Muse remembers up to eight connected devices so that everybody can enjoy a wireless connection. Connecting your Bluetooth™ equipped device only takes a minute so even your visitors can share their music.

Dock Free

Recent research has shown that many users store their music on their smart-phones and that the docking of their smart-phones with an audio device has become unacceptable.

The Wireless or 'dock free' technology allows you to retain your phone, providing instant track and volume selections while assuring the convenience of keeping your phone handy for calls.

Streaming

Many smart devices allow digital content to be streamed or downloaded from the Web. This can then be sent to the Muse via Bluetooth™, effectively relaying the content to this smart device.

The Muse allows you to listen to your favourite radio station from anywhere in the world – with access to virtually every radio station - or play from your Cloud music server.

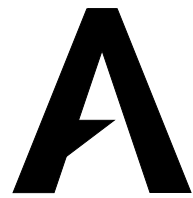

Note: Consult the owner's manual for your smart device to check for these features, installation of an application (App) may be required.

Not limited to phones

With Bluetooth™ wireless technology now embedded in many products, it is not only phones that can provide the music entertainment. Check your device for the logo, connect and enjoy

Heritage

The 3.5mm auxiliary input provides a second input point for your non Bluetooth™ 'old school' devices. Your

old MP3 player could become a great storage vault with the Muse providing the excitement.

Performance

To achieve this level of audio quality we've included specially designed speakers to ensure clarity and detail of sound. Our dual drive woofer delivers clean and tight bass tones. With 180 Watts of RMS amplifier power at the ready the Muse understands that occasionally, you like to party!

Two Way Remote Control?

The remote control functions for the Muse include power, input selections with a stepped bass control, and volume (you can pre-set your maximum volume limit).

Play, pause and track selection are also possible with many Bluetooth paired devices. The Muse will relay these commands remotely via Bluetooth™. Despite all of these abilities, your device remains the one in control. It is expected that after you pair your device with the Muse you will only ever turn it on via the remote control option.

'Auto power down' function ensures that if you leave the device unattended, after a short period of time the Muse will go to sleep, hence saving power.
